

Rahul Selvaraj

Senior AI Engineer — Agentic AI, Generative AI & Scalable AI Systems

Taiwan | srahul.pk98@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Summary

AI Engineer with 5+ years of experience designing, building, and deploying AI systems for industrial and medical applications. Specialised in agentic AI, multi-agent orchestration, RAG pipelines, and LLM integration with production-grade CI/CD on Google Cloud Platform. Co-inventor of two international patents (USA, Europe, Taiwan, India). Proven ability to translate complex business problems into scalable, production-ready AI solutions across changing domains and cross-functional teams.

Technical skills

AI & GenAI:	LLMs, VLMs, Whisper, RAG pipelines, Agentic AI, Multi-Agent Orchestration, Prompt Engineering, Vector Databases, Model Evaluation & Monitoring
Frameworks:	PyTorch, TensorFlow, Keras, HuggingFace Transformers, LangChain, OpenCV
Cloud & MLOps:	Google Cloud Platform, Vertex AI, CI/CD pipelines, Containerised Deployment, REST APIs, FastAPI
Programming:	Python (primary), C++
Tools:	Git, VS Code, Jupyter, GitLab

Professional experience

AI Engineer

Bizlink, Taiwan | Aug 2025 – Present

- Designed and deployed a multi-agent orchestration system for internal automation, taking it from architecture through CI/CD pipeline setup to production on GCP.
- Built and integrated agentic AI tools using LLMs, VLMs, and multimodal models into real-time industrial workflows, enabling automated decision-making across business processes.
- Developed scalable AI pipelines on Vertex AI, connecting multiple AI services and internal platforms through REST APIs for enterprise-wide deployment.
- Integrated open-source agent frameworks (including OpenClaw ecosystem) into enterprise infrastructure, defining reusable engineering patterns for AI solutions.
- Implemented model evaluation, monitoring, and guardrail mechanisms to ensure reliability and compliance of deployed AI systems.

Senior Software Engineer

Karma Medical Products, Taiwan | Oct 2021 – Jul 2025

- Co-invented two international patents for AI-driven algorithms and sensor-based designs, contributing to the 2025 Taiwan Excellence Award.
- Developed AI-powered posture detection and pressure alert systems using embedded sensor data and machine learning models, improving user safety for medical devices.
- Built cross-platform applications for end-users and internal testing, enabling seamless interaction with custom medical hardware.
- Automated actuator and sensor testing pipelines, reducing QA time by 90% and improving remote testability by 75%. Collaborated with European teams for CE and FDA compliance.

Open-Source Contributor & AI Researcher

Remote | Jan 2023 – Present

- Contributed to open-source LLM and RAG frameworks focused on agentic AI and real-time applications.
- Building a real-time audio translator (macOS/Windows) using Whisper.cpp and Google Translate APIs for live transcription and translation.

Key projects

LLM Multi-Agent Planning System

- Building an agentic AI orchestration platform using OpenAI GPT, Claude, LLaMA 2, and Mistral, with RAG pipelines and vector databases for long-context planning and multi-step reasoning. Containerised with Docker for reproducible deployment and scalable multi-agent coordination.

Self-Supervised Depth Completion for 3D Object Detection (M.Sc. Thesis)

- Proposed a self-supervised deep learning framework fusing sparse LiDAR point clouds and RGB images to generate dense depth maps, improving 3D object detection accuracy for autonomous driving on the KITTI benchmark (outperformed state-of-the-art on RMSE, MAE, and AP metrics).

Education

M.Sc. Electrical Engineering (Machine Learning)

National Chung Cheng University, Taiwan | Sep 2019 – Sep 2021

B.Tech Electronics and Instrumentation Engineering

SRM Institute of Science and Technology, India | Jul 2015 – May 2019

Certifications

- AI and Career Empowerment — Robert H. Smith School of Business, Mar 2026
- Understanding Agentic AI — Digital Workforce Services, May 2025
- Develop a RAG-based Solution with Azure AI Foundry — Microsoft, Apr 2025
- Evaluate Generative AI Performance in Azure AI Foundry — Microsoft, Apr 2025
- Develop an AI App with Azure AI Foundry SDK — Microsoft, Apr 2025
- Master AI, Large Language Models & Agents — Udemy, Apr 2025
- LangChain for LLM Application Development — DeepLearning.AI, Mar 2025
- Prompt Design in Vertex AI — Google Cloud, Mar 2025

Achievements

- Co-inventor of two international patents in smart assistive technology (USA, Europe, Taiwan, India).
- 2025 Taiwan Excellence Award for sensor-driven innovations in global medical device exhibitions.
- Reduced manual QA efforts by 90% with automated testing tools at Karma Medical.
